

Colour Mapping of Stones is part of PAB Local / performance protocols Nordic Sessions # 4: natural / cultural environments which is taking place around Skomakerdiket, Bergen (NO).

**Maja Gade** works with landscapes and the materials which shape them. This has developed into several installations performed in landscapes. *Colour Mapping of Stones* is an ongoing project in different locations. The colour maps have been made in Iceland, The Netherlands, Italy and several places in Denmark and now Norway.

**Colour mapping of stones, Bergen** is a collaborative performance. Visitors are invited to collect stones to map the colours of Skomakerdiket. The stones are collected at the site, sorted by colour and placed at the colour map. The stones are placed at the colour map according to the colour of each stone.

*Photo instruction*

*From Colour Mapping of Stones, Turin (2019)*

The example in the photos is from Turin, created with local stones.

In Bergen the stones and conditions are different.

- The colour map should be created with the colours of the stones found in the area.
- The size and placement of the colour map should be adapted to the local conditions.
